Professional Summary

Full Stack & AI Engineer | Mobile Specialist Forward-thinking Developer combining strong mobile engineering roots with advanced AI integration skills. Experienced in building RAG pipelines, adaptive learning engines, and offline-first mobile architectures. Ranked Top 10 out of 79 nationwide entries in the Awarri N-Atlas Hackathon Build Phase for developing "AwaSabi," an AI-powered indigenous language preservation platform. Proficient in Python, Flutter, and React, with a focus on solving cultural and educational problems through technology. Committed to applying cybersecurity best practices and delivering scalable, user-centric solutions.

Technical Skills

- **Languages: Python (Advanced), Dart, JavaScript/TypeScript, SQL, Bash.**
- **AI & Machine Learning: LLM Integration, N-Atlas Model, RAG Pipelines (LangGraph, ChromaDB), SentenceTransformers, Speech-to-Text (STT), OpenAI API.**
- **Mobile & Web: Flutter (GetX, Provider, Bloc), React, Vite, FastAPI, TailwindCSS.**
- **Databases: Firebase (Firestore, Realtime DB), Supabase, MySQL, SQLite, Vector Databases.**
- **Tools & DevOps: Git, GitHub, Docker, CVAT, Postman, Linux CLI, CI/CD pipelines.**
- **Cybersecurity: Threat Modeling, Secure Authentication, Input Sanitization (Google Cybersecurity Professional Certificate).**

Work Experience

AI Fellow (AI Developer Track) | *AI Fellowship, Nigerian Communications Commission (NCC) Kobape, Abeokuta* | 2025 – Present

- Selected for the specialized AI Developer track, focusing on engineering end-to-end AI solutions.
- Undergoing intensive training in building agentic workflows and production-ready applications using React, FastAPI, LangChain, and LangGraph.
- Implementing Vector Databases to architect advanced Retrieval-Augmented Generation (RAG) systems.
- Developing functional AI prototypes that integrate frontend interfaces with intelligent backend logic.

Data Annotator | *Awarri Lagos, Nigeria (Remote)* | November 2025 – January 2026

- Collaborate with the Awarri team to annotate, label, and validate high-quality datasets for training African-centric AI models.
- Ensure data accuracy and consistency to improve the performance and cultural relevance of Large Language Models (LLMs).
- Apply strict quality assurance guidelines to maintain the integrity of training data.

Freelance AI Trainer & Developer | *Multimango / Outlier Remote* | December 2025 – January 2026

- Train and refine AI models on complex web development tasks to improve code accuracy and reasoning.
- Conduct Named Entity Recognition (NER) and precise video/image labeling using CVAT to improve machine learning datasets.
- Debug and optimize AI-generated code snippets in Python and JavaScript.
- Collaborate in a high-compliance environment using time-tracking and productivity tools (Hubstaff).

Key Projects

1. AwaSabi (Awarri N-Atlas Hackathon) | AI-Powered Language Learning Platform

- Role: Lead Developer (Team of 4) | Status: Top 10 Finalist (79 Nationwide Entries)
- Tech Stack: React, N-Atlas Model, Python (FastAPI), Speech-to-Text.

- **Overview:** Developed an MVP to solve the erosion of indigenous Nigerian languages using adaptive AI.
- **Key Contributions:**
 - Integrated the N-Atlas model to power a dynamic curriculum engine that generates personalized lesson plans based on user age and proficiency.
 - Implemented Speech-to-Text functionality, allowing users to speak to the translator for pronunciation practice rather than just typing.
 - Engineered a "bridge" translation system supporting Nigeria's three major local languages, featuring gamified assessments to replace passive reading.
 - Designed a scalable architecture that adapts difficulty levels in real-time as the user progresses.

2. Ajee's Calculus Chatbot | *Educational AI Tool*

- **Tech Stack:** React, Python, Gemini API, LangGraph, ChromaDB, FastAPI.
- **Overview:** A specialized chatbot helping undergraduates master calculus concepts.
- **Key Contributions:**
 - Built a Retrieval-Augmented Generation (RAG) pipeline to minimize hallucinations and provide textbook-accurate math explanations.
 - Utilized SentenceTransformers for semantic search and context-aware retrieval.

3. Developer Portfolio | *Personal Brand Website*

- **Tech Stack:** React, TailwindCSS, Vite, FastAPI, MySQL, Firebase Hosting, Render.
- **Overview:** Created a responsive web portfolio to showcase projects and technical writing, featuring automated CI/CD deployment via GitHub Actions.

4. YouTube Downloader | *Desktop Utility App*

- **Tech Stack:** Flutter Desktop.
- **Overview:** Designed a standalone application to bypass browser restrictions, featuring robust file handling and session reliability.

5. E-commerce App + Admin Panel | *Full Stack Mobile Solution*

- **Tech Stack:** Flutter, Firebase, Stripe.
- **Overview:** Built a dual-interface app (User & Admin) managing real-time stock, secure payments, and analytics dashboards.

Education

Bachelor of Science (B.Sc.) in Statistics *Obafemi Awolowo University, Nigeria* | 2019 – 2025

- **Final Year Project:** Designed a multi-step IoT authentication system using mathematical combinatorics (Mutually Orthogonal Latin Squares) to ensure high entropy and security.

Certifications

Deploying AI into Production with FastAPI *DataCamp* (2025)

Introduction to FastAPI *DataCamp* (2025)

Google Cybersecurity Professional Certificate *Coursera* (2025)

- Completed comprehensive training in Python automation, Linux security, SQL injection mitigation, and incident response.
